

Matrimony App

Client clarification questions

This document contains the questions that must be answered before development can begin. It was produced by reviewing the Internal Developer Work Document (48 sections) and identifying every point where the specification is silent, ambiguous, or self-contradictory.

Only questions that change the architecture, the cost, or the core behaviour of the product are included. Every other open item has been assigned a sensible default, and those defaults are available on request.

24 questions

9 areas

Sections A to I

Contents

- A** Profile Preview & Privacy (A1, A2, A4)
- B** Pricing & Payment (B1, B3, B5)
- C** The 24-Hour Unlock (C3)
- D** Profile Fields & Verification (D1, D2, D3, D9)
- E** Discovery & Ranking (E1, E2)
- F** Admin Dashboard & Moderation (F1, F2, F4, F6)
- G** Notifications (G1)
- H** Legal & Compliance (H1, H2, H3)
- I** Design, Timeline & Scale (I1, I2, I3)

A. Profile Preview & Privacy

These decide what a user sees before paying, which is the core promise of the product.

A1

(Section 13)

Age and date of birth

The document lists Date of Birth as visible before payment, but also lists Age as hidden "if derived from DOB". If the full date of birth is sent to the app, anyone can calculate the age, so hiding it achieves nothing. Which do you want?

- (a) Show the full date of birth, and accept that age is visible
- (b) Show only the birth year or a masked date such as "1994", so age stays effectively hidden
- (c) Hide the date of birth entirely

A2

(Section 13)

Religion and community on the free preview

The hidden-before-payment list does not mention religion or community in the preview header. Should a user be able to see a candidate's religion and community / caste before paying, or are these part of the hidden information?

- (a) Hidden until payment
- (b) Visible on the free preview
- (c) Community hidden, religion visible

A4

(Sections 21, 15)

Profile deleted or suspended during an active unlock

A buyer has paid for 24-hour access. If the profile owner then deletes their account, or an admin suspends them, what happens to the buyer's access and to the money already paid?

- (a) Access continues, no refund
- (b) Access stops immediately, automatic full refund
- (c) Access continues, credit note issued for a future unlock

B. Pricing & Payment

The revenue model, and what happens when money and access fall out of step.

B1

(Section 4)

Whose price applies

The schedule in the document is ₹99 base plus 18% GST = ₹116.82 total for a Below ₹2Cr category user, and ₹249 base plus 18% GST = ₹293.82 total for an Above ₹2Cr category user. Because users can only discover profiles in their own category, it is unclear whose price applies when someone unlocks a profile. Please confirm:

- (a) The buyer's category price always applies, so a Below ₹2Cr buyer always pays ₹116.82
- (b) The price belonging to the target profile's category applies

B3

(Section 15)

Paying for a profile that is already unlocked

Can a user pay again to unlock a profile they have already unlocked and that is still inside its 24-hour window? The document implies not. Please confirm the duplicate purchase should be blocked and that no charge should be created.

B5

(Section 27)

Refund policy

The document mentions "view refund status" but defines no policy. Please state the policy for each of the following: duplicate payment, profile deleted mid-unlock, account suspended, admin error, and a user paying by mistake.

C. The 24-Hour Unlock

C3

(Section 42)

Expiry reminder

The notification table lists "Unlock approaching expiry" as an event. Is a reminder required at launch? If yes, how long before expiry should it be sent, for example 2 hours or 30 minutes?

D. Profile Fields & Verification

These affect database design, search quality and cost.

D1

(Sections 8.1-8.6)

Parent, sibling and in-law profiles

The document has no parent, sibling or in-law photos, and no field for the user's own role such as son, daughter, brother, sister or self. Indian matrimony users typically expect at least a parent's photo, and sometimes a sibling. Should this be added at launch?

- (a) Single-person profile only, as the document currently specifies
- (b) Add a parent's photo and the user's own role
- (c) Full family profile, covering parents, siblings and in-laws

D2

(Section 8.2)

Horoscope fields and compatibility matching

The document says "Nakshatra/Rashi and other configured horoscope fields" without listing them. Please provide the exact fields required, for example Rashi, Nakshatra, Gan, Devanagari name, Manglik status and planet placements. Please also confirm whether horoscope compatibility matching between two people is in scope, or whether horoscope data is only displayed.

- (a) Display only, no matching
- (b) Display plus a compatibility score
- (c) Display plus a compatibility score that explains the match

D3

(Sections 8.2, 8.3)

Master lists versus free text

For Education, Profession, Company, Annual income, and Community / Caste, do you want fixed dropdown lists from an admin-managed master table, or free-text entry? This significantly affects how well Discovery search and filters work, because free-text values cannot be reliably filtered.

- (a) Master lists for all fields, recommended
- (b) Master lists for Education and Profession, free text for the rest
- (c) Free text for all fields

D9

(Sections 20, 43)

Fake profile prevention

"Fake profile" is listed as a report reason, but the document contains no verification mechanism. Is identity verification in scope for launch? Note that face or ID verification is a significant additional cost and timeline item.

- (a) No verification at launch, rely on admin photo review and reporting
- (b) Manual admin verification of a submitted document
- (c) Automated selfie liveness or ID check, such as Aadhaar or DigiLocker

E. Discovery & Ranking

What a user actually sees, and in what order.

E1

(Section 12)

Users with no Partner Preference set

If a user has not set a Partner Preference, should Discovery return all approved and active profiles in their own category, or should the app prompt them to complete a preference first?

- (a) Return all profiles in their category
- (b) Prompt to complete a preference first, show nothing until then
- (c) Return a limited default set and prompt the user to refine

E2

(Section 12)

Sort order of Discovery results

The document refers to Discovery results but does not define the ranking. Please choose the primary order.

- (a) Newest profiles first
- (b) Closest location first
- (c) Match or compatibility score first
- (d) Admin-promoted or pinned profiles first

F. Admin Dashboard & Moderation

These define who can do what, and at what operating cost.

F1

(Section 26)

Profile and photo review volume

Is manual admin review of every profile and every photo required before it appears in Discovery? If so, how many moderators are available and what turnaround is expected? At scale, manual review of every photo becomes the main bottleneck. Would automated photo screening with admin spot-checks be acceptable?

- (a) Manual review of every profile and every photo
- (b) Automated screening with admin spot-checks
- (c) Automated screening, with manual review only for flagged profiles

F2

(Section 33)

Admin roles and permissions

The document names four roles: Super Admin, Admin, Moderation Admin, and Finance/Admin. Please confirm this list is final, and specify which role may perform each sensitive action: changing a user's net-worth category, editing pricing, issuing a manual unlock, and deleting a user.

- (a) Only Super Admin may change category or edit pricing. Only Super Admin may issue a manual unlock, and every such action is audit logged. Recommended.
- (b) Admin may change category and pricing; manual unlock is Super Admin only
- (c) All four roles may change pricing; category changes are Super Admin only

F4

(Section 30)

Report outcomes, block duration and appeals

For a reported profile, please confirm three things. Is a block permanent or temporary, and if temporary, for how long? Is any warning shown to the reported user? Is there an appeal process for suspension or deletion?

- (a) Permanent block, no warning, no appeals
- (b) Temporary block with a defined period, warning issued, appeal available
- (c) As (b), but the client sets the block duration and appeal window

F6

(Section 21)

Data retention after account deletion

How long should deleted user data be retained before permanent erasure? The document refers to soft deletion and anonymisation before permanent deletion, but sets no timeline. A defined retention period is normally required to satisfy data protection obligations.

G. Notifications

G1

(Section 42)

Notification channels

Which delivery channels are required at launch? Please note that SMS carries a per-message cost.

- (a) Push notification only, with OTP delivered by SMS
- (b) Push notification and email, with OTP delivered by SMS
- (c) Push, SMS and email for all events

H. Legal & Compliance

These should be resolved before launch, not after.

H1

(Section 41)

Privacy Policy and Terms of Service

Do you have a Privacy Policy and Terms of Service drafted? Both are normally required before app store submission, and this app collects religion, community, horoscope, income, family details and contact numbers.

- (a) Our counsel will provide them
- (b) Please draft them, and we will have them professionally reviewed
- (c) Deferred for now, to be arranged before launch

H2

(Section 42)

Minimum age to register

Please confirm the minimum age to register. The document implies adults, and the app collects horoscope, income, community and family information. Is any proof of age required?

- (a) 18 and above, no proof required
- (b) 18 and above, date of birth verified during profile review
- (c) 21 and above

H3

(Section 41)

Data residency and data protection obligations

Should all user data, including photos, be stored in India only? The app processes sensitive personal data and the Digital Personal Data Protection Act applies. A data protection review before launch is strongly recommended. Consent capture, data minimisation, and an account data export and deletion request flow can all be implemented if required.

I. Design, Timeline & Scale

These determine effort, cost and the shape of the delivery plan.

I1

(Section 5)

UI/UX design ownership

Do you have UI/UX designs or a brand identity? The document specifies 18 user-facing screens and 14 admin screens with no visual design attached. If no designs exist, is producing them part of this engagement?

- (a) Designs already exist and will be provided
- (b) Developer team to propose screen designs for your approval, in scope
- (c) Designs to be produced by a separate designer, out of scope

I2

(Section 45)

Target launch date

What is the target launch date, and is there a hard external commitment, investor deadline or contractual obligation driving it? This determines how much can be delivered for launch and what must be deferred to a later release.

I3

(Section 24)

Expected scale at launch

How many registered users do you expect at launch, and how many daily active users? This determines hosting cost and whether the design must handle growth from day one. Please give a target figure, for example 5,000 registered and 500 daily active, or 500,000 registered and 50,000 daily active.

How to respond

Each question is identified by a code such as A1 or D3, matching the table of contents on page 1. Replies may be given as a list, for example:

A1 - (b) B2 - text A02 - (a)

Where a question has lettered options, please reply with the letter. Where it asks for a policy or a figure, a short written answer is fine.

Two points worth raising early

- **This is a paid contact-disclosure product.**

The specification centres on a one-off unlock fee, a 24-hour window, and releasing a personal contact number. In India that model attracts closer scrutiny around fake profiles, harassment and consent than a free listing site does. Questions A4, D9 and H3 are not optional extras; they materially reduce the risk of complaints once real

users are on the platform.

- **The document's completion rule is the right one.**

Section 48 correctly requires the responsible developer to verify UI flow, backend behaviour, database updates, authorization, error states and test cases before a module is marked complete. We would add one line: no module ships until its corresponding tests in the QA test plan (Section 43) pass.
