Networth Matrimony — Open Questions for Client Decision

Date: October 15, 2026 | **Prepared by:** Development team | **Status:** Awaiting client answers

Every item below is a point where the build is correct but one product, policy, or supplier decision is still open. Each entry states why it matters, the options, and what we recommend, so a decision can be given in a single reply. Supplier credentials and access we still need are listed separately at the end.

Summary — decisions requested

#	Topic	Question	Our recommendation	Blocks
1	Storage residency (GAP-11)	May user photos and ID documents be stored on Cloudflare R2, which cannot guarantee India-only residency?	India-region bucket for sensitive data, R2 for non-sensitive	Storage finalisation, Privacy Policy
2	Discovery ordering (GAP-3)	"Newest and closest" is two orderings — which is primary, and is distance a tiebreak or a blend?	Newest primary, distance as tiebreak	Discovery ranking & index
3	Preference filtering (GAP-10)	Do saved partner preferences (age, city, religion, …) filter discovery, or only the two-way category lists?	Yes, preferences filter	Discovery scope
4	Family photos (GAP-4)	Is a family photo required or optional, which photo is the cover, and is it visible before payment?	Optional; single photo is the cover; not visible before payment	Profile & photo moderation
5	Net-worth boundaries (GAP-2)	For a value of exactly ₹2 Cr, ₹5 Cr or ₹10 Cr, which band applies?	Assign upward into the higher band (current build)	Category assignment
6	Unlock vs deletion (GAP-1)	If a paid contact's profile is deleted mid-unlock, is the buyer left with nothing, or given a future-unlock credit?	Issue a credit for a future unlock	Payments policy
7	Who may delete a user (GAP-6)	Which admin role may delete a member account?	Super Admin only	Admin permissions
8	Aadhaar handling (GAP-9)	Confirm the app must never store a full Aadhaar number — only a reference and masked last-4.	Confirm as implemented	KYC / compliance
9	Email provider	Which supplier sends transactional email (SMS and push are already chosen)?	Client to choose; MSG91 or an equivalent	Email delivery
10	Legal documents (GAP-7)	Are the Privacy Policy and Terms of Service part of our contracted scope (subject to professional review)?	Confirm in scope	Launch compliance
11	UI/UX design (GAP-8)	Confirm the 18 user-facing and 14 admin screens of design are in the 30–60 day scope.	Confirm in scope	Mobile app & dashboard
12	Mobile platforms	Android, iOS, or both — and who owns the app-store accounts?	Both; client-owned store accounts	Phase 9 mobile app

Decisions in detail

1. Storage residency (GAP-11)

Why it matters: Answer H3 committed the platform to India-only data residency. Cloudflare R2 (chosen 2026-10-01) offers EU, US, FedRAMP and "default" jurisdictions but **no India jurisdiction**; an Asia-Pacific setting is only a best-effort location hint, not a guarantee.

Photographs, family details and identity documents are in scope, so this is a written commitment that needs a deliberate answer.

- (a) Accept it — downgrade H3 to "Asia-Pacific, best-effort" and state so in the Privacy Policy.
- (b) [Recommended] Keep an India-region bucket for photos and ID documents, use R2 for non-sensitive assets.
- (c) Keep everything in India and drop R2.

We recommend (b) if the R2 cost saving is worthwhile, otherwise (c). We advise against (a): it resolves the conflict by weakening a commitment you have already made.

2. Discovery ordering (GAP-3)

Why it matters: Answer E2 said "newest and closest profile first", which names two orderings. The choice changes the database index and the query, so it should be settled before the ranking is tuned. The build currently orders newest-first.

- (a) [Recommended] Newest-registered first, using location distance only to break ties.
- (b) A blended score combining recency and distance.
- (c) Nearest first, newest as the tiebreak.

3. Do saved preferences filter results? (GAP-10)

Why it matters: E1 covers the case where no preference is set, but not the case where one is. If preferences filter, a narrow preference can make some profiles effectively undiscoverable. The build currently treats saved preferences as filters alongside the two-way category rule.

- (a) [Recommended] Yes — saved preferences filter results.
- (b) No — preferences only affect sort, never hide a profile.

4. Family photos (GAP-4)

Why it matters: D1 asked for both a single-person *and* a family group photo, which was not one of the offered options. Three things remain undefined, and automated photo screening behaves differently for a group photo (multiple faces).

- Is a family photo **required**, or optional alongside a mandatory single photo?
- Which photo is the **cover** image shown on cards?
- Is the family photo visible **before payment**, or withheld like the name?
- [Recommended] Optional; the single-person photo is the cover; not visible before payment.

5. Net-worth band boundaries (GAP-2)

Why it matters: The bands are "below ₹2 Cr" and "₹2–5 Cr", so a value of exactly ₹2 Cr, ₹5 Cr or ₹10 Cr has no defined home. This is a data-integrity question. The build currently assigns a boundary value **upward** into the higher band.

- (a) [Recommended] Confirm the current rule: exactly on a boundary goes into the higher band.
- (b) Send exact boundary values to an admin-review bucket instead.

6. Unlock when the target profile is deleted (GAP-1)

Why it matters: Answer A4 said no refund and immediate deletion with no access. If the owner of a profile a member has just paid to contact deletes their account, the buyer loses access to a contact they paid for. At the top band that is ₹1,178.82 paid for nothing, with no appeals route (F4).

- (a) Keep the money and grant nothing (current behaviour under A4).
- (b) [Recommended] Issue a credit note for a future unlock — the only option that leaves the buyer whole.

7. Who may delete a member account (GAP-6)

Why it matters: F2(a) restricted category changes, pricing edits and manual unlocks to the Super Admin, but the question also asked about deleting a user and was not answered. Deletion now also triggers an archive-and-purge obligation.

- (a) [Recommended] Super Admin only.
- (b) Any admin holding a dedicated `user:delete` permission.

8. Aadhaar handling (GAP-9)

Why it matters: The platform never stores a full Aadhaar number — only the DigiLocker/UIDAI reference and a masked last-4, plus a consent record. Some verification flows appear to expect the full number; we want this confirmed as acceptable.

- [Recommended] Confirm the app must never hold the full number (as currently built).

9. Email provider (GAP-12, remaining half)

Why it matters: SMS (MSG91) and push (Firebase) are chosen and built. Email is the last channel with no sender, so any email notification is currently recorded but not delivered. A single `EMAIL_PROVIDER_API_KEY` keeps the choice a configuration change.

- Name the email provider and supply credentials (see the list below).
- Confirm the sending domain so SPF/DKIM/DMARC can be configured.

10. Legal documents (GAP-7)

Why it matters: H1(b) puts the Privacy Policy and Terms of Service on this engagement, subject to professional review — a new line item. The app collects religion, caste, horoscope, income, family details, contact numbers and Aadhaar references.

- [Recommended] Confirm these are in the contracted scope (and priced), not absorbed silently.

11. UI/UX design (GAP-8)

Why it matters: I1 answered "minimalist, developer team to propose designs", which puts 18 user-facing and 14 admin screens of design in scope.

- [Recommended] Confirm this sits inside the 30–60 day estimate and is priced accordingly.

12. Mobile platforms and store accounts

Why it matters: The mobile app (Phase 9) is the last major build. The target platforms and store ownership affect effort and release timing.

- Android only, iOS only, or both? [Recommended: both]
- Who owns the Google Play and Apple Developer accounts? [Recommended: the client]
- Target Android/iOS minimum versions, if any.

Credentials and access

These are not decisions; they are the credentials, accounts and identifiers needed to run and verify each integration. What has already been supplied is listed first, with the environment it covers, so it is clear what is genuinely still outstanding.

Already received

Service	What we received	Environment / note
Firebase (push)	FCM service-account JSON (HTTP v1)	Production project credential — push is configured with it
Object storage (Cloudflare R2)	Endpoint, bucket, access key and secret key	Live bucket in use — subject to Decision 1 on residency
Razorpay (payments)	Key ID and key secret	**Test mode only** — live keys still required to take real payments
Cashfree Secure ID (KYC)	Client ID and client secret	**Sandbox only** — live credentials still required
MSG91 (SMS)	Provider authkey	Shared key — **please rotate it before production**

Still needed

Service	What we need	Why it is still open
Razorpay (payments)	Webhook secret; production (live) key ID and secret	No webhook secret is set, so every webhook is currently rejected (the gateway fails closed); the keys on file are test-mode.
MSG91 (SMS)	Sender ID, template ID, and DLT entity / template IDs; rotation of the shared authkey	Sending is built but a real OTP has not been exercised; DLT registration is mandatory for transactional SMS in India.
Cashfree Secure ID (KYC)	Production credentials; per-check pricing; consent / DLT position	Only sandbox credentials are held, so live verification cannot run. Recommended flow is DigiLocker, not OCR.
Email	Provider, credentials, and the sending domain	The email channel has no sender yet (Decision 9); SPF/DKIM/DMARC are configured once the domain is known.

DLT registration	Status of the TRAI DLT registration	Mandatory for transactional SMS regardless of provider, and client-owned.
Object storage	India-region bucket credentials — only if Decision 1 changes away from R2	Needed only under options (b) or (c) of Decision 1.

How to reply: a one-line answer per numbered decision is enough (for example, “2 → (a), 4 → optional / single is cover / hidden, 5 → (a)”). Recommendations are marked in green; where you accept them, “agreed with all recommendations” will let us proceed immediately.
